## Solo module sofa to create multiple configurations, ideal for single or multiple occupants

### Multi-person use

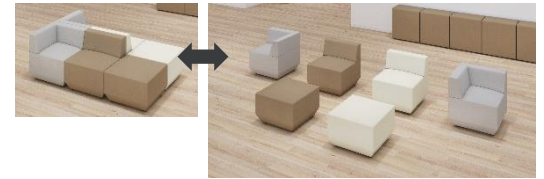

### Lounge use

### Individual use

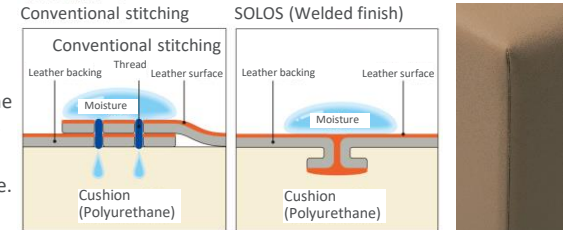

Adopting a suitable size as a one-seater and a clean design when placed together. The solo module makes it easy to move, allowing the layout to be flexibly and freely changed to cater for layout changes.

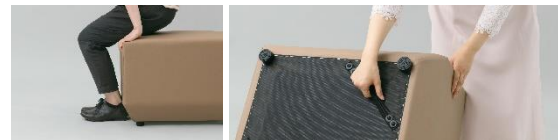

## ■ Waterproof finish for safe and long-use

Instead of the conventional stitching process, a welding process is used whereby the upholstery is welded together by applying heat. This process prevents moisture and dust from penetrating into the cushion layer. In addition, the seamless shape of the cushions makes it easy to wipe clean and maintain their comfortable usability over a long period of time.

## ■ Emphasis on ease to stand up and sit down, and flexible configuration ability.

Foot design to support standing and sitting

A belt on the under-side of the seat can be used as a handle when moving the sofa.

Phase free certification is a system for certifying products and services that consist of both everyday and emergency value. Certification is granted after an audit by the Phase free Association.

# SOLOS

Solos can be combined in a variety of ways.

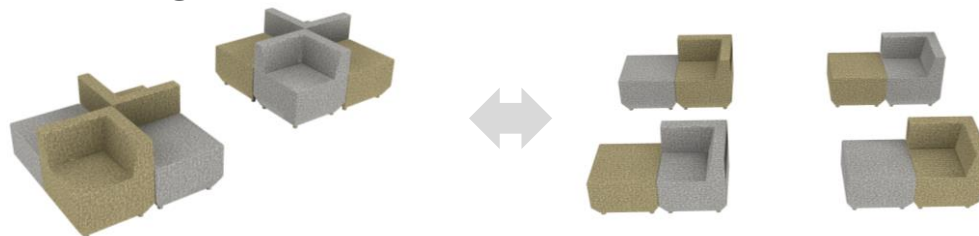

The furniture can be reconfigured to provide quick setups for both everyday and emergency situations.
