FUNCTION

3-support functions to maintain spinal S-shape curve.

3-stage pelvis adjust support

The lower back can be set inwards to one of 3-positions to provide support to the lower back, thus holding the pelvis in place to maintain adequate seating posture. Simple level adjustment to the backward leaning / upright / forward leaning position.

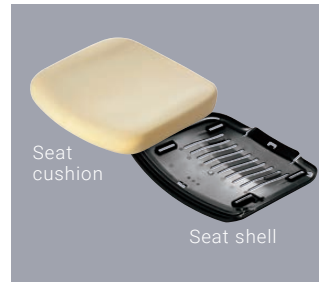

White back

Black back

Lumbar support

Together with the back curvature adjustment, an add-on lumbar support will further enhance the support to the lower back region between the pelvis and waist.

Seat cushion

Seat shell

Posture support seat

The seat shell adopts an indented and pliable seat shell to firmly hold the pelvis in place, and allows for an even distribution of weight and flexibility of movement.

Auto-tilt mechanism

The seat surface automatically adjusts to forward / backward leaning postures in accordance to body movement. This maintains the spinal S-shape curvature even in the forward leaning posture. Further, the Auto-tilt enhances weight dispersion and relieves pressure on the under thighs.

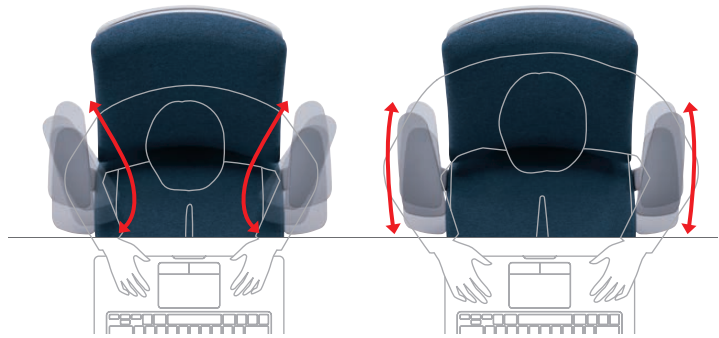

3°

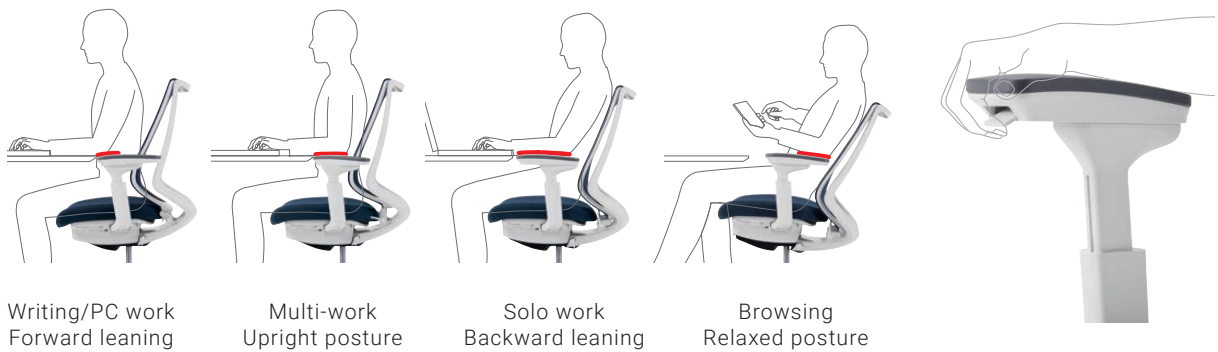

FUNCTION

2-way motion armrest

2-way motion armrest with a wide adjustment range to suit different seating posture from forward leaning / upright / backward leaning postures. Sliding motion arms to cater differences in body physique and improved operability to be used in the optimal position.

The lift lever is located under the armrest. Since the fingertips can reach the lever while the hand is on the armrest, it is easy to adjust both vertically and horizontally.

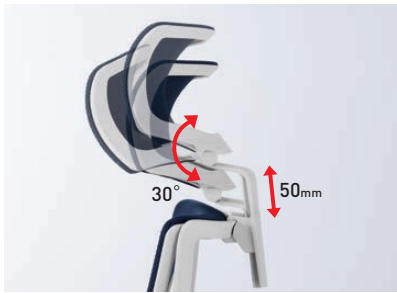

Adoption of Recycled Materials and Sustainable Design for Long-Term Use

Office chairs are composed of numerous parts. That's why we are committed to environmental considerations, such as using recycled materials for each part. After purchase, the easily soiled back and seat upholstery and cushions can be replaced. It has become possible to use longer than the traditional Duora. Also, the back can be replaced with either cushion or mesh.

FUNCTION

Adjustable headrest

Height and angle adjustable headrest to suit different body physique and working postures. Support to the back of the head to reduce pressure strain on the back and neck.
 Height range: 50mm / 6-stages
 Angle range: 30°

Auto-fit synchro tilt

Synchro backrest with smooth unhindered tilt. Stabling counterforce to maintain balance, and weight operated tilt tension control.

CleanTect coating

Stain-preventive coating on white coated 5-star bases will prevent dirt and shoe marks, as well as being easy to clean.

Back angle adjustment

The tilting angle is selectable from 4-settings.
 [Upright fixed position (0°), 6°, 13°, 20°]
